

document imaging.
Easy. Fast. Smart.

docSTAR™ WebView.

Fingertip access to every document. Anytime. Anywhere.

A visible improvement in your document management.

WebView enables you to view documents stored in docSTAR from any computer via the Internet or corporate intranets. It works with wide-area networks and broadband Internet. Now you can put documents at the fingertips of your customers, field employees, other important people and the general public — anywhere, any time — improving your response time, cutting your costs and increasing your profits.

visit us at www.docstar.com

Easy does it.

- ★ WebView is very easy to use because it combines the simplicity of a Web browser with docSTAR's powerful search and retrieval features.
- ★ Browser-based user interface makes finding documents as easy as surfing the Net — log in, perform your searches, and view your documents.

Keep it simple.

WebView is exceptionally easy to support because:

- ★ You install software only on the host docSTAR system and everything is centrally managed from the docSTAR host.
- ★ There's no dedicated application on each client computer.
- ★ You minimize technical support time, costs and headaches.

Add accessibility without subtracting security.

WebView provides the same level of security you've come to expect from docSTAR. You can create user identities and passwords. Permit varying levels of access. Use Secure Socket Layer (SSL) connections. And rely on docSTAR's exclusive AuthentiDate™ technology with EPM to assure that your documents have not been altered.

System Requirements

docSTAR Software, Version 3.2 or later.

Windows 2000 Server or later server operating system.

Client, Windows: Internet Explorer 5.5 or later.

Client, Macintosh: Internet Explorer 5.0 or later.
