# docSTAR™ NetConnect.

*Now you can scan, file and retrieve your documents. Anytime. Anywhere.*
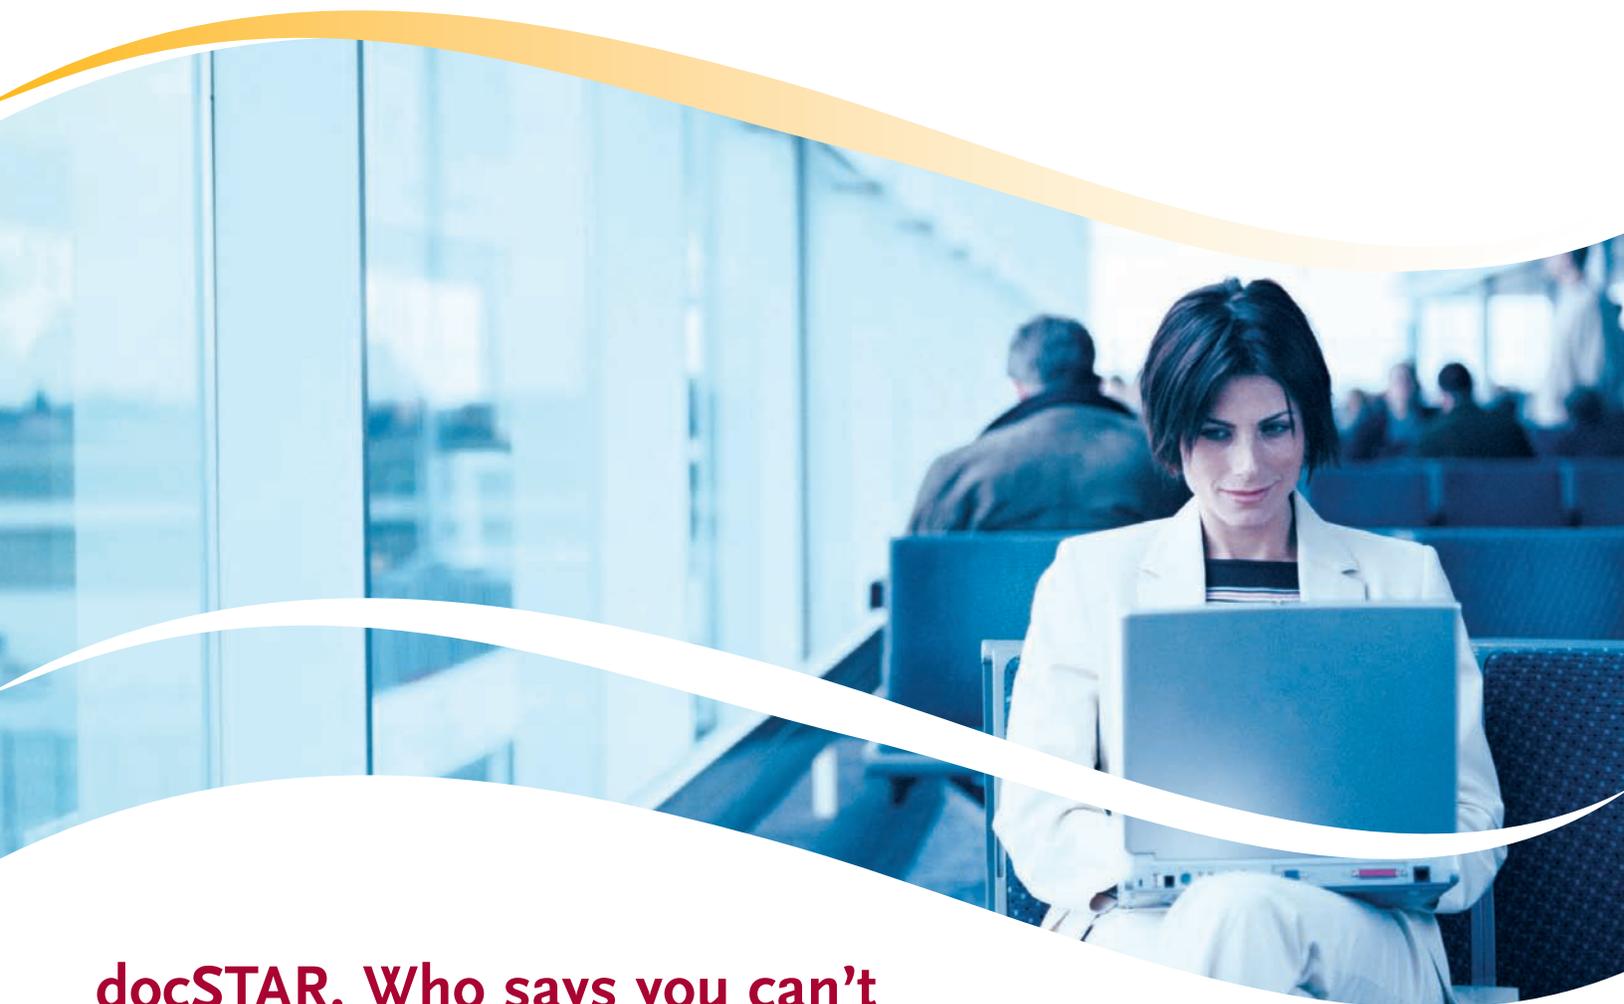

## docSTAR. Who says you can't take it with you?

NetConnect is an innovative software module which lets your remote offices and home-based workers share your central docSTAR system through a high-speed internet connection or over a WAN — maximizing your profits and productivity.

## Better document management. To go.

★ **Now you can work with docSTAR across the Internet the same way you do in the office.**

★ **Scanning, filing, retrieving and viewing documents across the country is as simple as being connected through your LAN.**

★ **Information passes seamlessly over the Internet, behind the scenes, without additional steps or complicated user intervention.**

## Comes with its own security blanket.

Because NetConnect was developed upon standard Internet protocols (http, https), it melds seamlessly into your secure network environment.

★ **Compatible with most firewalls, routers and gateways so your documents are accessible to you anywhere, but out of reach of hackers and other unwelcome visitors everywhere.**

★ **NetConnect works with docSTAR's exclusive AuthentiDate™ technology and EPM, which gives your documents bulletproof security against unauthorized tampering.**

### System Requirements

*docSTAR Version 3.1 or later.*

*Windows 2000 Server or later server operating system.*

*Client PC running docSTAR RetrieveUser, FileUser or ScanUser software with Microsoft Internet Explorer 5.0 or later installed.*

*WAN or high-speed Internet connection\* required for docSTAR Host and each remote client.*

*Suitable network security features and anti-virus software are highly recommended.*

**\*** NetConnect works with broadband connections only; it is not designed for use with dial-up Internet connections.

**docStar** ™

document imaging.   **Easy. Fast. Smart.**
